

1 **ABSTRACT OF THE DISCLOSURE**

2
3 The present invention utilizes real time, live stream
4 videoconferencing as a means to conduct various types of
5 transactions whereby the identity of the person or the
6 signature of the person or an electronic document must be
7 authenticated, and whereby the parties are geographically
8 remote. To this end, the inventive device includes a video
9 conference or communication system, simultaneous audio and
10 video exchange, an electronic signature capture device, a
11 digital certificate, an electronic notary device, biometric
12 data input; an electronic document repository, encryption
13 technology, and a central process service center.
